

What is claimed is:

1. An optical device module comprising an optical device, an optical fiber an end of which is optically  
5 coupled to the optical device, a package containing the optical device and the optical fiber, and an insertion tube fixed through the wall of the package, the optical fiber extending through the insertion tube out of the package, wherein the end portion of the optical fiber is offset with  
10 respect to a fixed portion of the optical fiber which fixed portion is sealed within the insertion tube, to bend the optical fiber between the end portion and the fixed portion of the optical fiber.

2. The optical device module according to claim 1,  
15 wherein a ring member having an through hole for inserting the optical fiber is inserted co-axially within the insertion tube and sealed with the insertion tube by soldering, through the ring member.

3. The optical device module according to claim 1,  
20 wherein the end portion of the optical fiber is fixed through a ferrule which is fixed to a ferrule holder capable of being deformed plastically.
